# COLLECTION OF PLAIN MINOR METHODS

ISBN 978-0-900271-22-9

---

THIRD EDITION

---

2008

## INTRODUCTION

This collection contains details of all the possible symmetric Bob and Place Minor methods with five leads in the plain course. It includes methods with bells making more than two consecutive blows in the same position, as well as methods which have appeared in the *Collection of Minor Methods*.

The collection comprises a table of the place notations of all the methods, with the methods numbered in sequence from 1 to 1778, an alphabetical index and an appendix showing the correspondence between the method numbers appearing in the *Collection of Minor Methods* prior to the 6th edition and those in this collection.

Each row incorporates place notation up to and including the half lead place and the lead end produced (treble's handstroke row). The three columns to the left of the notation indicate which methods (if any) result from making, respectively, seconds, fourths or sixths place when the treble leads its whole pull, producing the next lead head. Where no name is given, a valid method is produced, but it has not yet been rung or named. Where the symbol "--" appears, this indicates that no valid method is produced.

Where the symbol "\*\*\*" appears in the fourths place lead head column, either on its own or following a name, this means that the method produced by making fourths place at the treble's lead consists of bob leads of the corresponding seconds and/or sixths place method.

Each method (including those marked "\*\*\*") is allocated a number, although only the first number associated with each notation appears at the start of the row of the table.

All methods have the classification Bob, with the exception of those specified as Place. Unnamed Place methods have their classification in parentheses. Unnamed Single and Double methods have these prefixes in parentheses with the number of the corresponding Double or Single method. Unrung methods whose names are already established have their names in parentheses.

Suitable compositions appear in the *Collection of Minor Methods, 6th edition, 1984*.

So far as possible, index entries include the method number appearing in the *Collection of Minor Methods* prior to the 6th edition in **bold** type or a Ringing World reference of the form year/page. The index also contains a number of other names that have been used in the past for some of these methods. These names are included in *italics* for record purposes.
